Summary

Strategic Design candidate at Politecnico di Milano with a background in UX/UI design and innovation strategy. Experienced in translating complex healthcare and societal challenges into scalable digital products and AI-enabled service ecosystems. Skilled in user research, systems thinking, and interaction design, with a strong focus on preventive technologies that improve human autonomy and reduce systemic strain.

Skills

Design: UX Design, UI Design, Interaction Design, Design Systems, Information Architecture
Research & Strategy: User Research, User Interviews, Usability Testing, Systems Thinking, Strategic Design
Tools: Figma, Adobe XD, Adobe Illustrator, Adobe Photoshop, Adobe InDesign

Experience

UX Design Intern — EventBeep Sep 2022 – Dec 2022
Pune, India

- Designed wireframes and interaction flows in Figma for the EventBeep mobile application
- Conducted user interviews to identify usability issues and improve user experience
- Redesigned UI components contributing to a 25% increase in user engagement
- Collaborated with product and development teams to iterate on design solutions

Graphic Design Intern — Aashman Foundation Apr 2022 – Jul 2022
Delhi, India

- Designed infographics, icons, and marketing visuals for digital campaigns
- Improved website engagement and traffic by 30% through visual design improvements
- Collaborated with marketing teams on branding and campaign communication

Education

Master in Strategic Design Oct 2025 – Feb 2027
Politecnico di Milano *Milan, Italy*

BA (Hons) Design Jan 2020 – Dec 2023
University for the Creative Arts *United Kingdom*

- Graduated with Distinction
- Bachelor thesis recognized by faculty for potential patent development

Projects

Diabetes Manager
Smart Diabetes Monitoring Ecosystem (Bachelor Thesis)
Designed a smart diabetes management system that helps people monitor blood sugar levels, track medication, and manage daily health habits more easily.
Key Features
- Blood glucose tracking and visualization
- Predictive alerts for potential sugar level changes
- Medication reminders and adherence monitoring
- Lifestyle recommendations based on user data
- Shared dashboard for doctor–patient communication

Faculty Recognition
The project received a faculty remark recommending exploration for patent development due to its preventive healthcare approach.

AURA
AI Driven Smart living for Elderly
Designed a smart home ecosystem that helps elderly people live safely and independently in their homes. The concept uses AI and environmental sensing to detect early signs of instability and prevent falls before they happen.

The system combines smart flooring that analyzes walking patterns, adaptive lighting that adjusts based on movement and time of day, and an ambient AI device that responds to physical and emotional signals.

Key Contributions

- Conducted research with elderly residents, caregivers, and healthcare professionals to understand challenges of aging at home
- Designed the full system ecosystem including product concepts, service flows, and user journeys
- Developed an AI intervention framework that detects risk patterns and adjusts the home environment
- Created a subscription-based business model for scalable smart living infrastructure
- Defined metrics to measure independence levels, fall prevention, and caregiver stress reduction

Impact Vision

Transform homes into intelligent environments that prevent emergencies rather than reacting to them.
